

# GOAL ZERO

Goal Zero is our number one priority – this means no harm to people or the environment. Everyone working for us strives to achieve this goal every day.

In our Goal Zero journey we are supported by our Golden Rules:

- We comply with the law
- We intervene in unsafe or non-compliant situations
- We respect our neighbours.

Our company is required to gain and comply with consents, which are monitored by the regional and district councils. These consents require us to carry out our activities in ways that minimise any impacts on the environment and the communities we operate in.

We also follow Shell's global safety standards and share and learn from the experiences from others in our industry; which apply to everyone who works with us – employees and contractors. We work hard to make sure our facilities are well designed, safely operated, properly inspected and maintained.

However, for us it is not just about compliance – we believe that safe, reliable operations are the foundations of a sustainable, responsible business.

Safety is at the heart of our business.

**Questions? Let us know! We aim to be a good neighbour in the community, so we want to hear from you.**

# GETTING TO KNOW OUR TANK FARMS

# WHO WE ARE AND WHAT WE DO

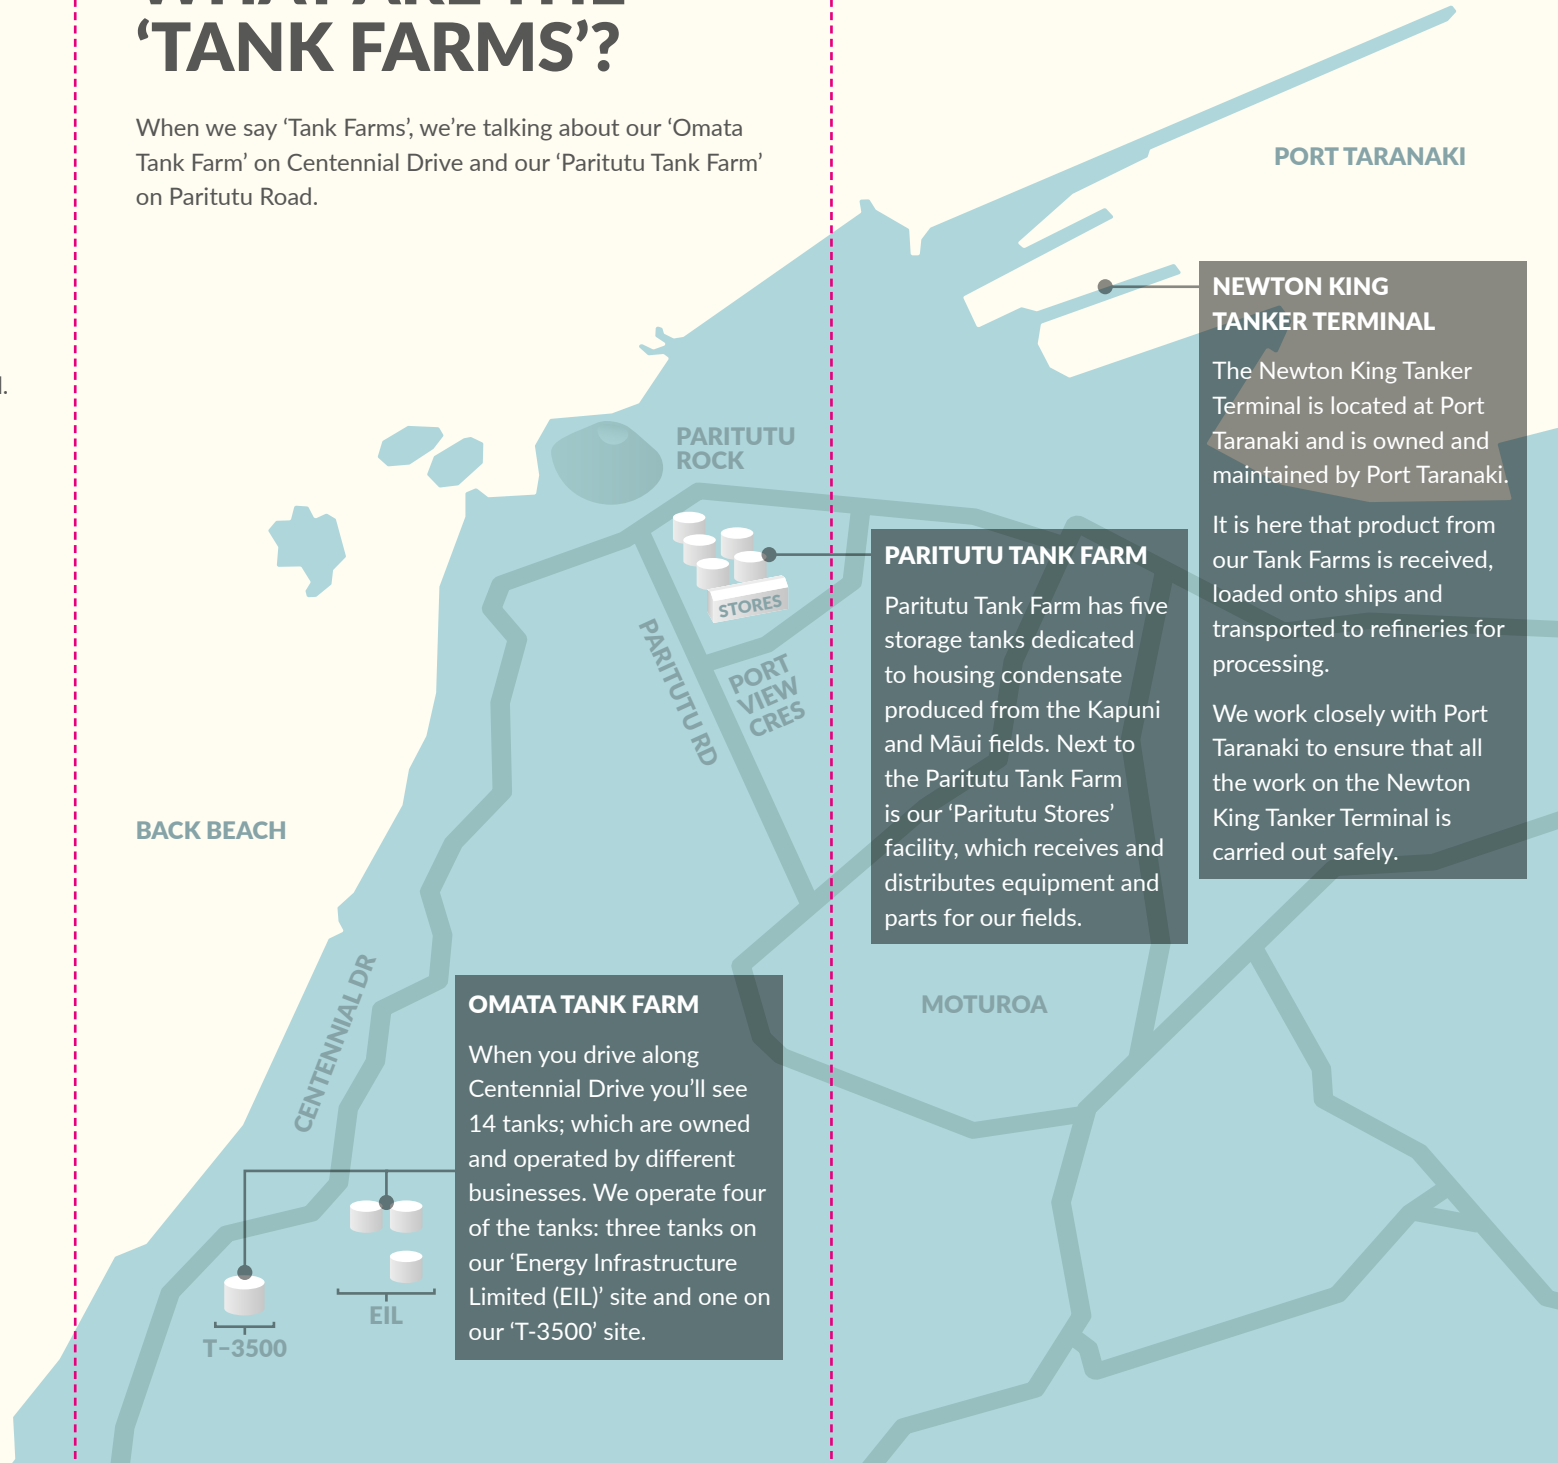

Shell Todd Oil Services Limited (STOS) is an energy operator and we've been active in Taranaki for more than 50 years. We're owned by Shell Petroleum Mining and Todd Petroleum Mining, each holding a 50% stake in the company.

Producing vital natural gas to New Zealand, we operate the Māui and Kapuni natural gas fields and provide support to Pohokura's operator Shell Exploration New Zealand Limited.

We also operate nine tanks holding condensate (light oil) and some crude oil, which is piped and trucked in from the fields and other businesses. The products are then piped to the Newton King Tanker Terminal (Port Taranaki) to be shipped off to refineries for processing, either within New Zealand or internationally.

# WHAT ARE THE 'TANK FARMS'?

When we say 'Tank Farms', we're talking about our 'Omata Tank Farm' on Centennial Drive and our 'Paritutu Tank Farm' on Paritutu Road.

## PARITUTU TANK FARM

Paritutu Tank Farm has five storage tanks dedicated to housing condensate produced from the Kapuni and Māui fields. Next to the Paritutu Tank Farm is our 'Paritutu Stores' facility, which receives and distributes equipment and parts for our fields.

## NEWTON KING TANKER TERMINAL

The Newton King Tanker Terminal is located at Port Taranaki and is owned and maintained by Port Taranaki.

It is here that product from our Tank Farms is received, loaded onto ships and transported to refineries for processing.

We work closely with Port Taranaki to ensure that all the work on the Newton King Tanker Terminal is carried out safely.

## OMATA TANK FARM

When you drive along Centennial Drive you'll see 14 tanks; which are owned and operated by different businesses. We operate four of the tanks: three tanks on our 'Energy Infrastructure Limited (EIL)' site and one on our 'T-3500' site.
